

# ReSpec.

## Respect the voice. Define the spec.

From thousands of customer comments to a ranked, evidence-backed requirement list for the next 5 Series, with the product manager in control of every decision.

19
RANKED REQUIREMENTS

Every requirement links to findings, every finding to original quotes, internal data plus web sources. The ranking is plain code, not a black box. The PM approves, edits or rejects.

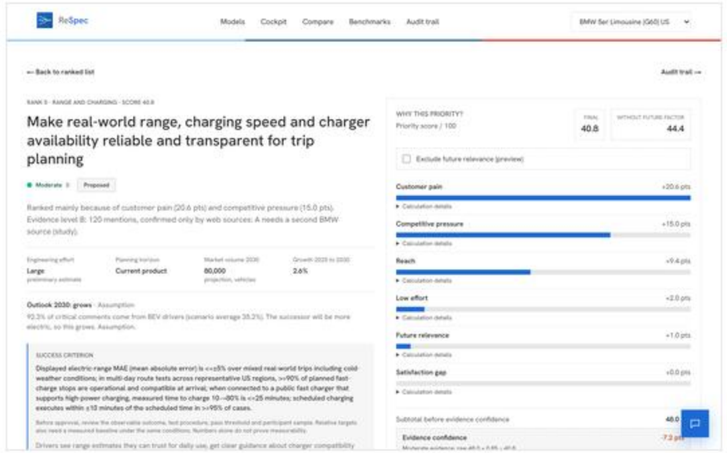

Source: data/processed/G60-US.json → funnel · scenario BMW 5 Series G60, US

## ① WHY THIS RANK?

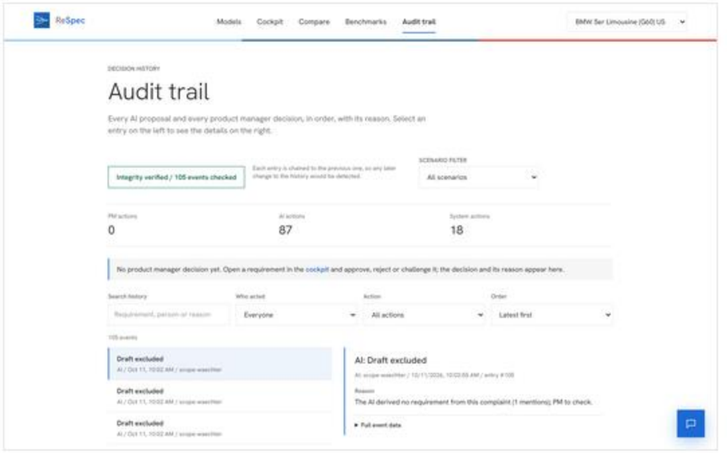

**Transparent reasoning:** score waterfall, original quotes, evidence level A.

## ② CONFLICT & CHALLENGE

**Conflicting evidence:** shown, not averaged away. PM questions the AI, edits, approves.

## ③ WEIGHTS & AUDIT

**PM firmly in control:** change a weight, list re-ranks, every step is logged.

# We measured it. And we say where it stops.

**100%**

CITED EVIDENCE IDS EXIST

**100%**

QUOTES FOUND VERBATIM IN THE EXCEL

**88%**

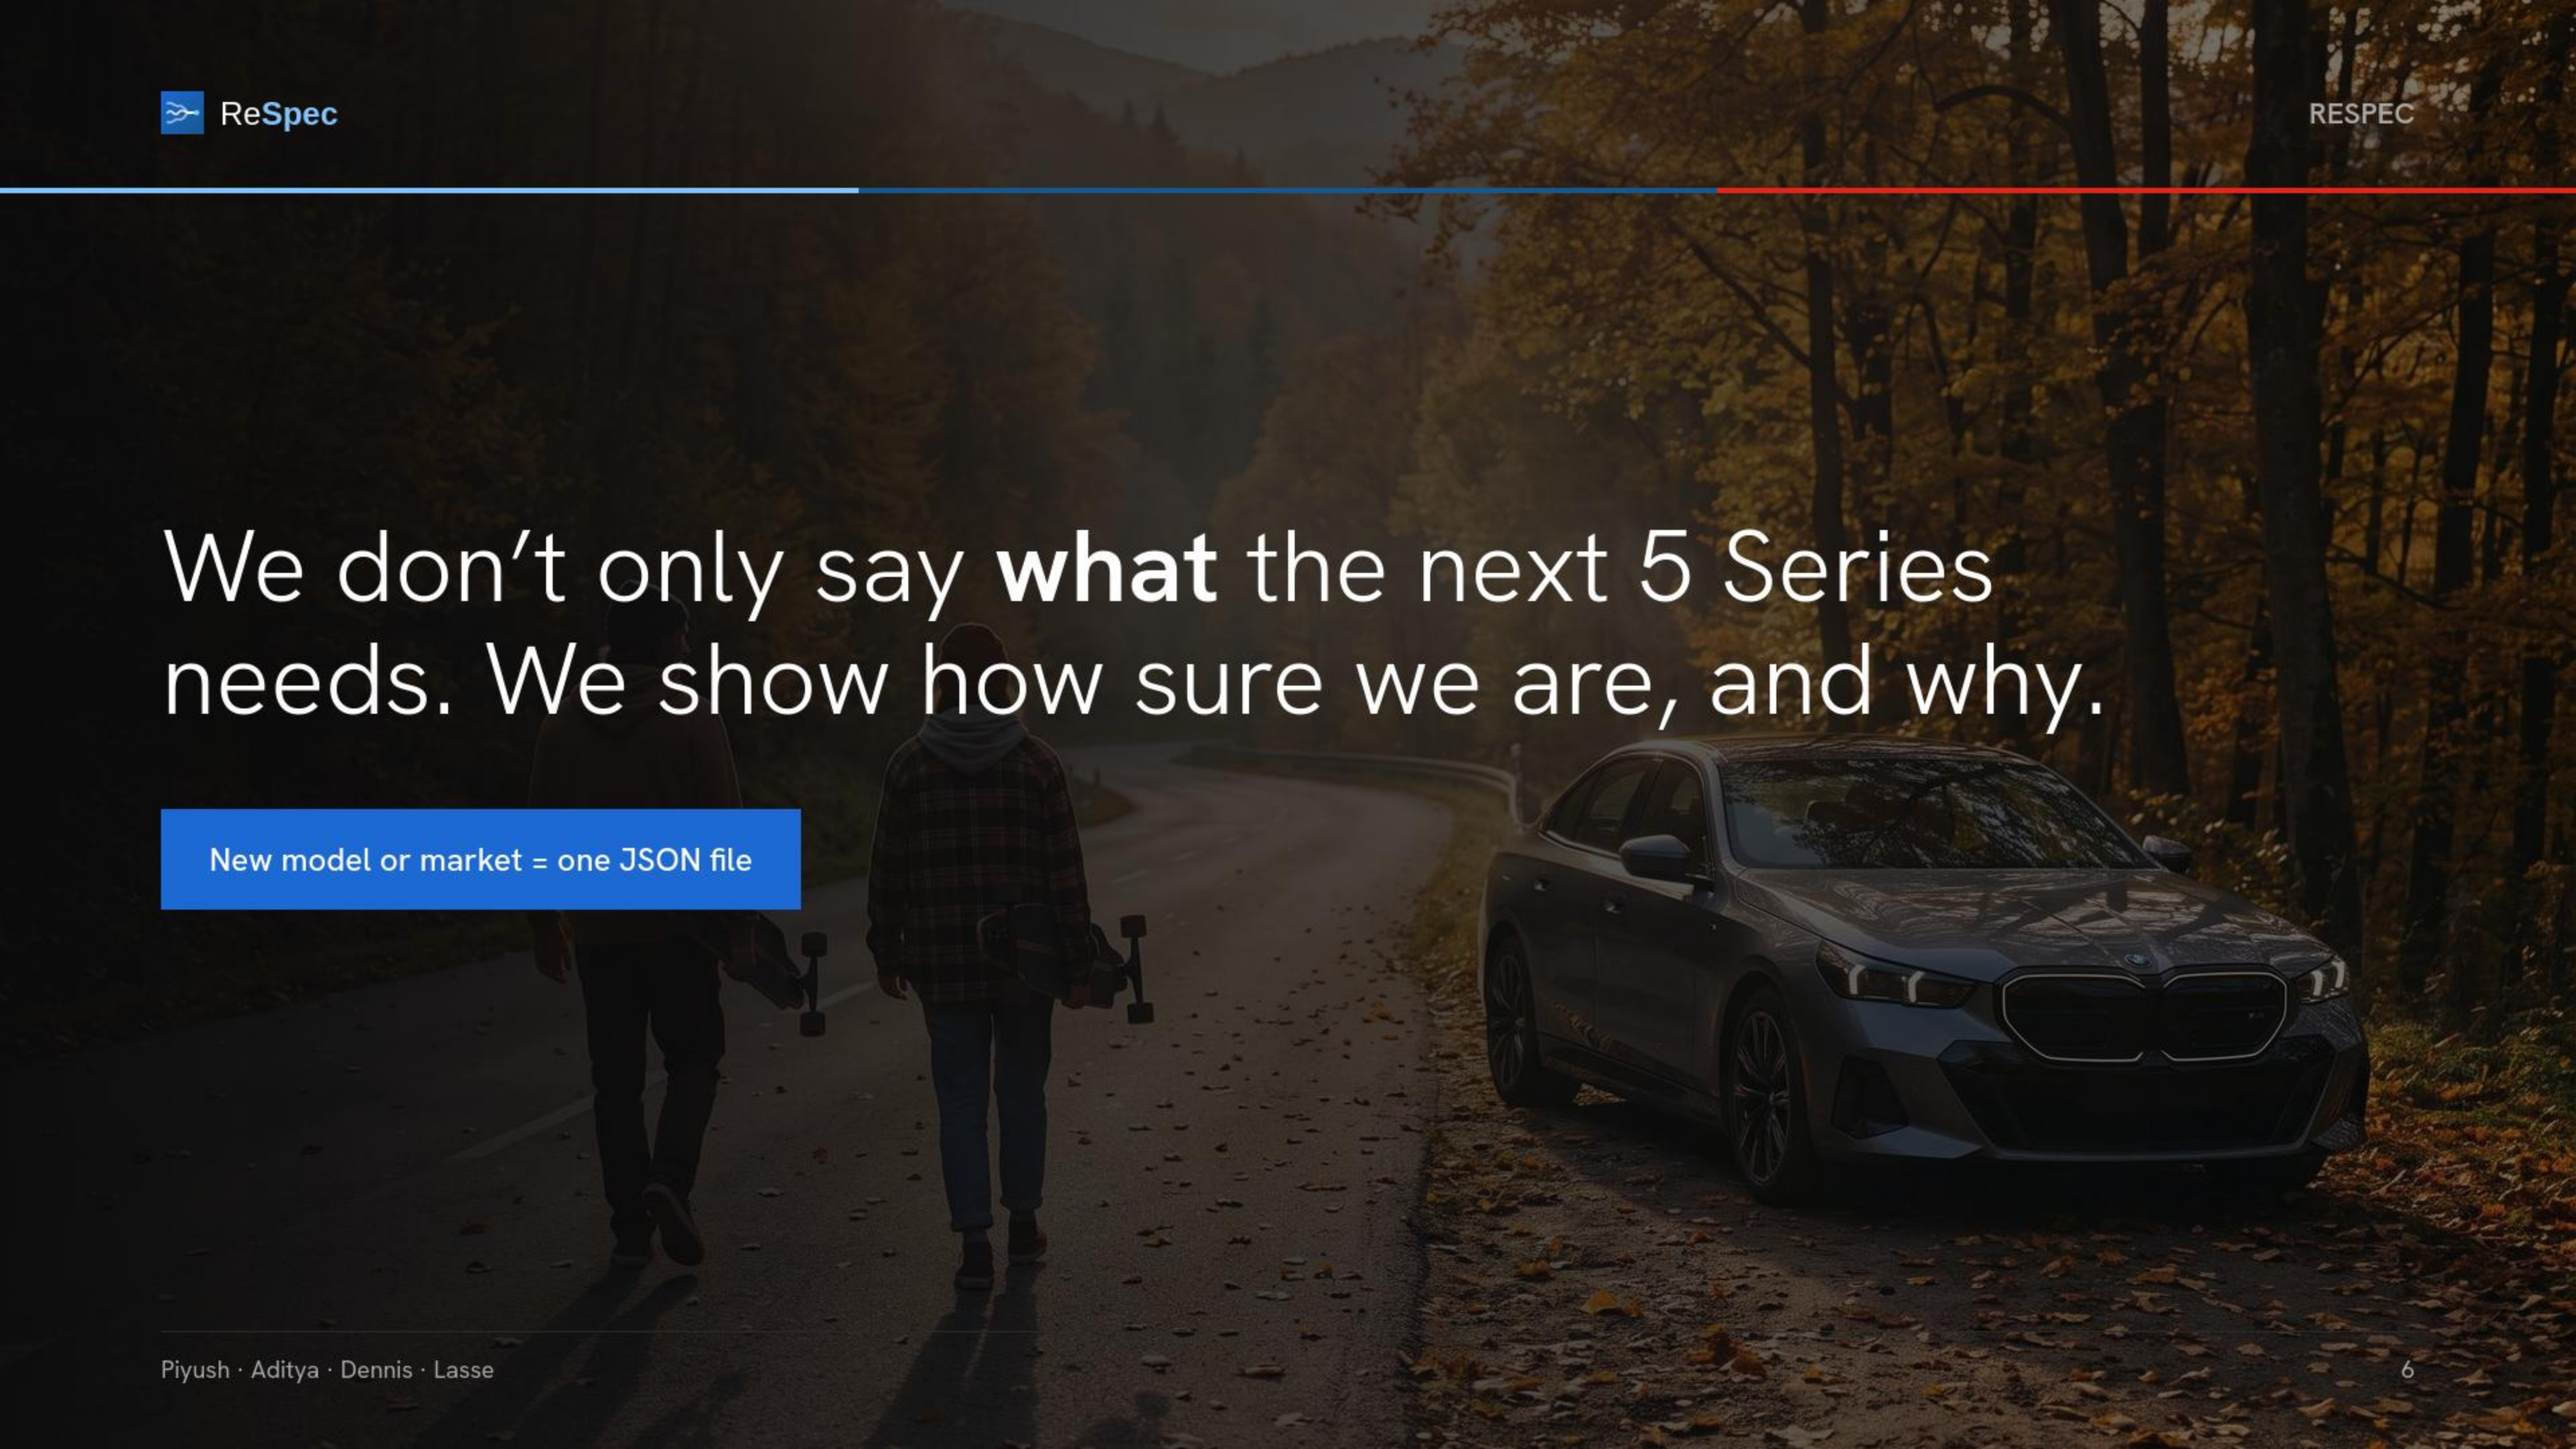

FINDINGS BACKED BY THEIR QUOTE (50 LABELLED)

**6**

SCENARIOS: 4 MODELS, 3 MARKETS (US, EU, CN)

**Honest limit:** humans checked AI suggestions on 50 pairs, no blind label, no confidence interval. Grounding proves a source exists, not that the conclusion is right.

# Top 6 of 19 requirements for the next 5 Series (G60, US)

Source: data/processed/G60-US.json → requirements (top 6 of 19)

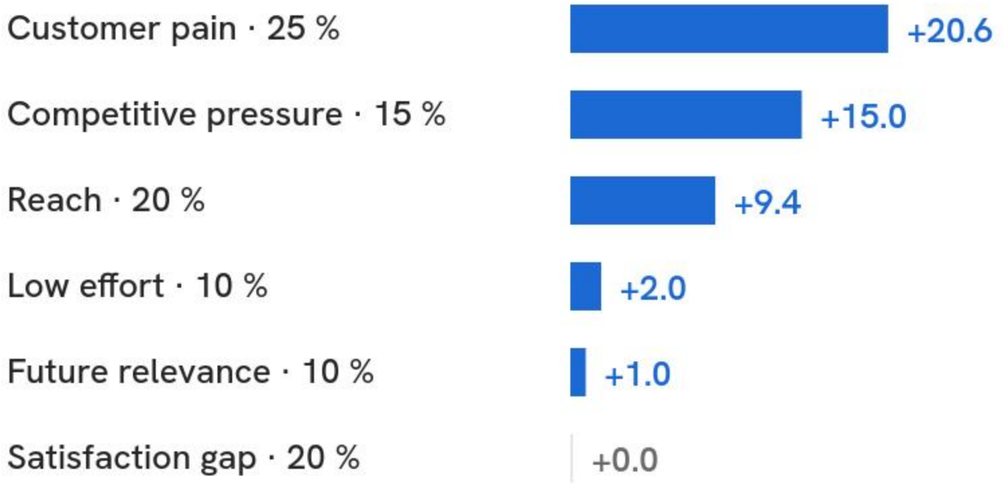

# Six visible factors. Weak evidence is discounted, not hidden.

RANK 1 · EVIDENCE LEVEL A

**Priority score** 48.3

RANK 5 · EVIDENCE LEVEL B

**Subtotal** 48.0

× 0.85 evidence level B = 40.8

Source: data/processed/G60-US.json → score_breakdown (rank 1, rank 5)

# Rank 5, range and charging: the evidence disagrees. We show it.

**By drivetrain**

**By data source**

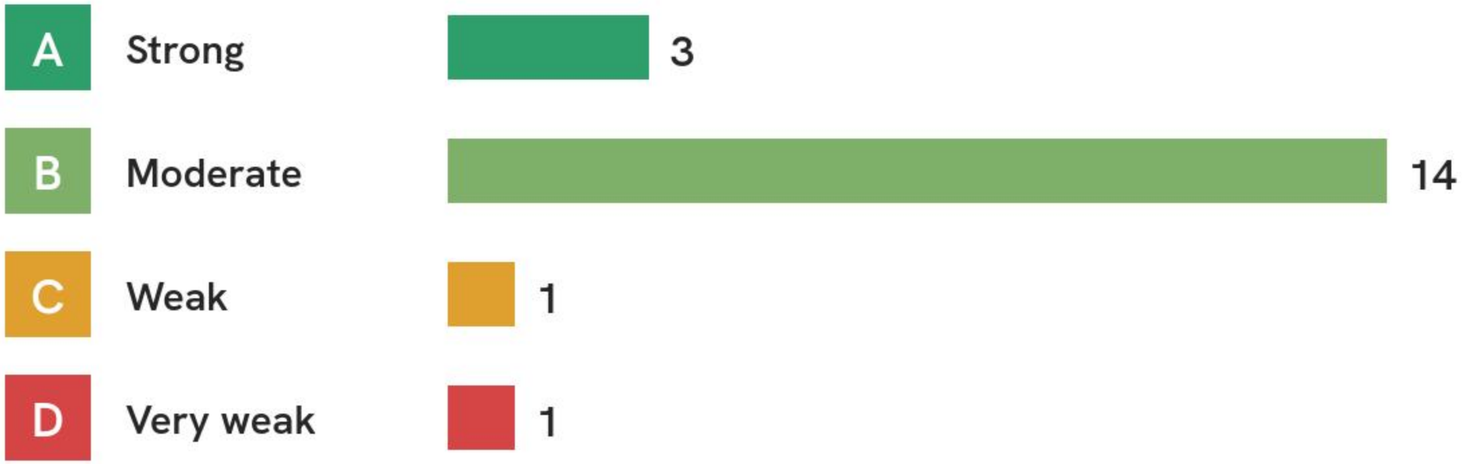

**Range feels limited and fluctuates vs. Range is better than quoted and fits commute**

Both findings stay linked and visible. The PM weighs them.

Source: data/processed/G60-US.json → rank 5 → segment_conflicts

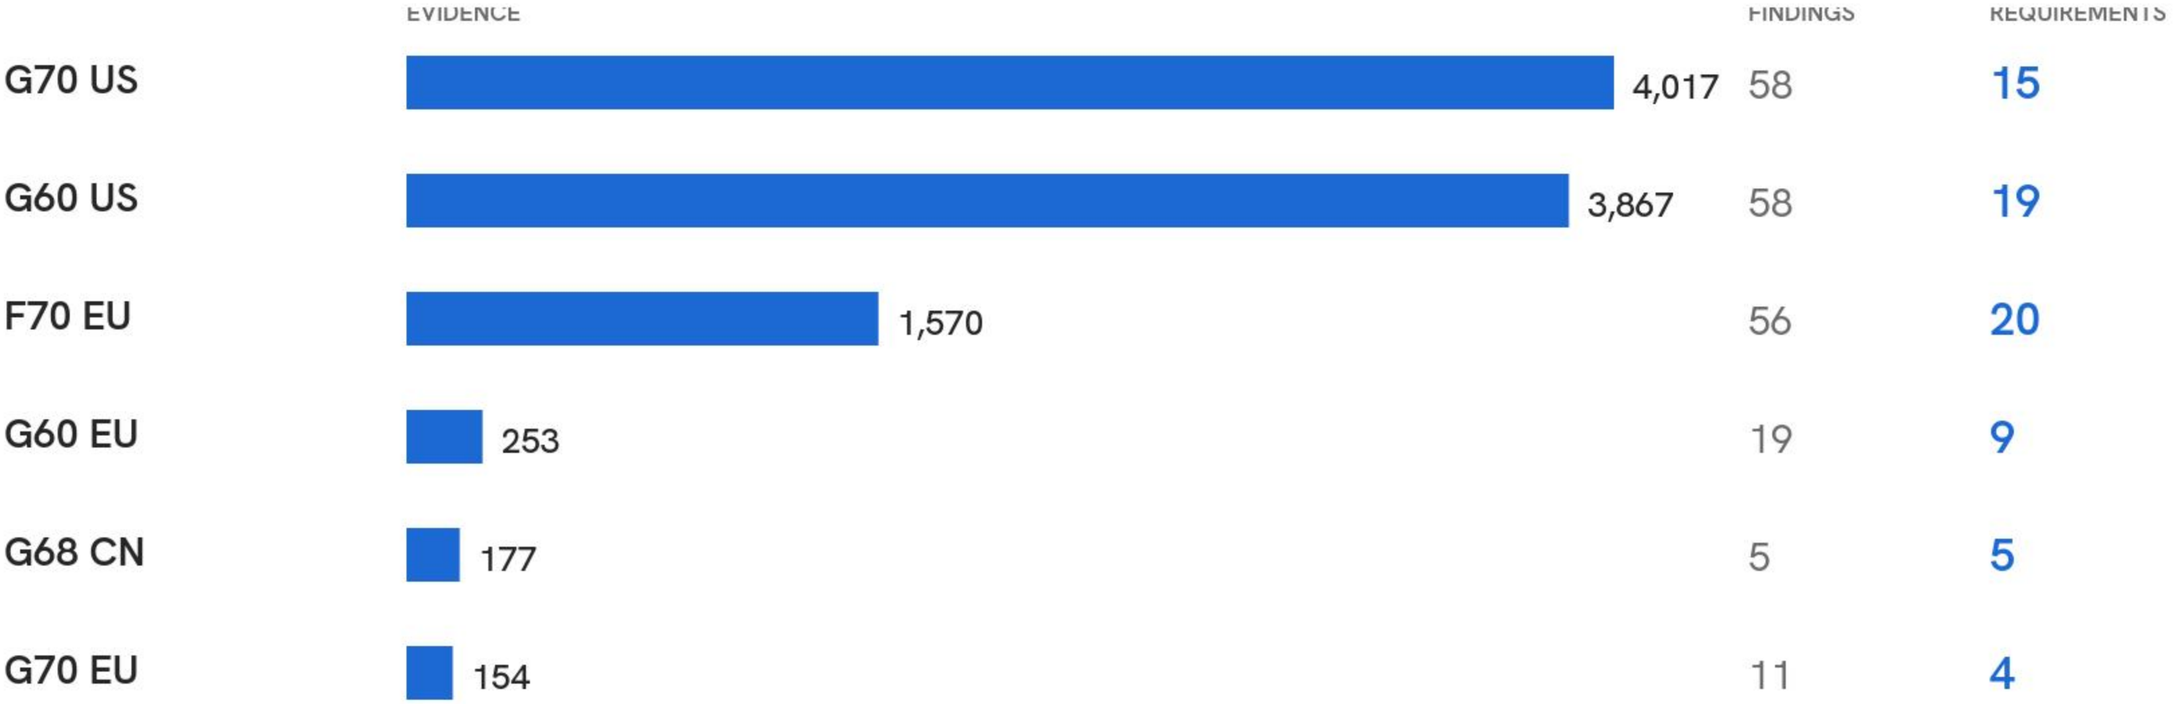

# How sure are we? Every requirement carries a level from A to D.

A: confirmed by at least two independent source types · B: moderate · C/D: weak, flagged for the PM

Source: data/processed/G60-US.json → requirements[].evidence_level (19 requirements)

# One pipeline, six scenarios. Thin data is flagged.

Source: data/processed/*.json → funnel · a new scenario = one file in config/scenarios/

# What ReSpec does not claim

### Evidence ≠ proof

Level A/B means strong/moderate support, not absolute truth.

### Effort & prices

Rough estimate and DE list prices as context. No optimised business case, no measured time saving.

### Eval size

50 labelled pairs, humans checked AI suggestions. Blind second label is the next step.

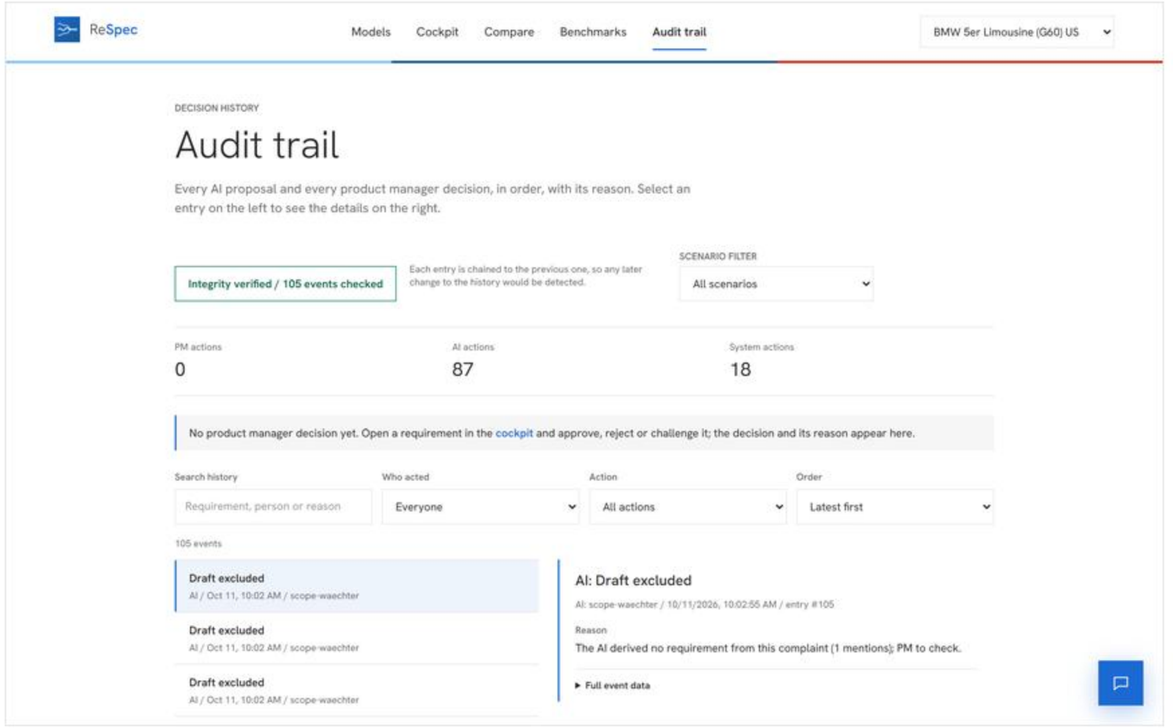

### Out of scope

Regulation, detailed technical design, detailed profitability.

# Every decision is traceable.

Who, when, why, before and after. Each entry carries the hash of the previous one, so edits break the chain and verification shows where. CSV export included.
